The science behind cannabis testing

Regulatory compliance, testing throughput, operational costs, and method development are important factors to consider.

We help laboratories, growers, marijuana-infused products (MIP) processors and extractors tackle the science of cannabis testing through application support and flexible financing solutions.

Whether you are starting up a new lab or expanding your testing capabilities, Quantum Analytics is here to help.

We offer a total solution for your laboratory needs, and help you select the best equipment for your testing needs today and tomorrow.
